

To do the configuration settings, follow the below mentioned steps:

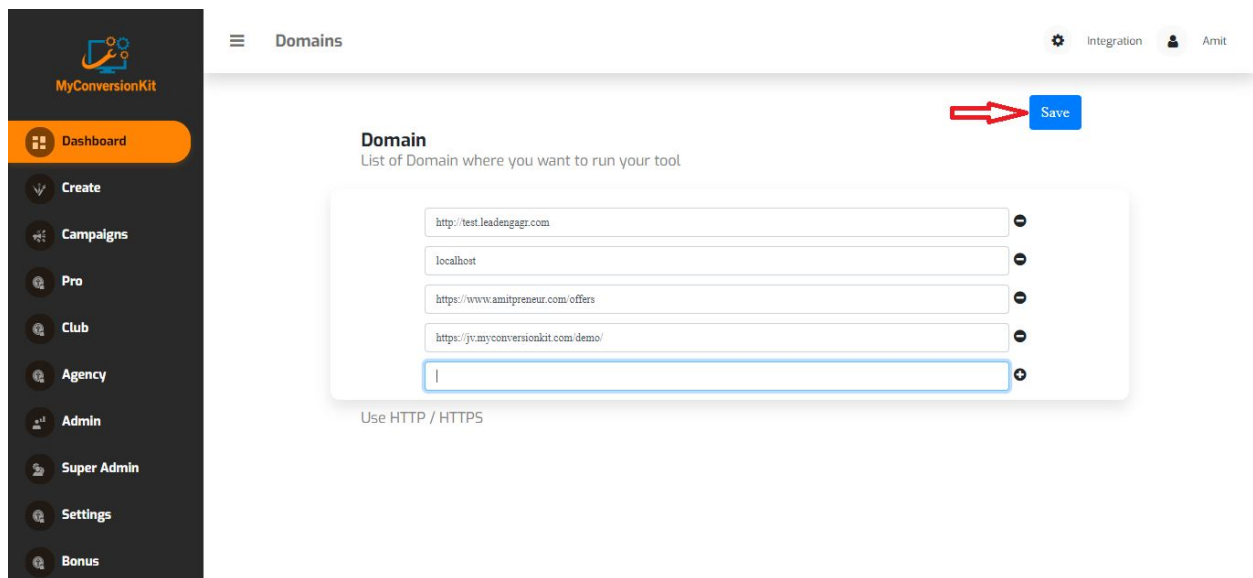

Step1: In your MyconversionKit dashboard, click on the settings icon and select “Domain profile” option.

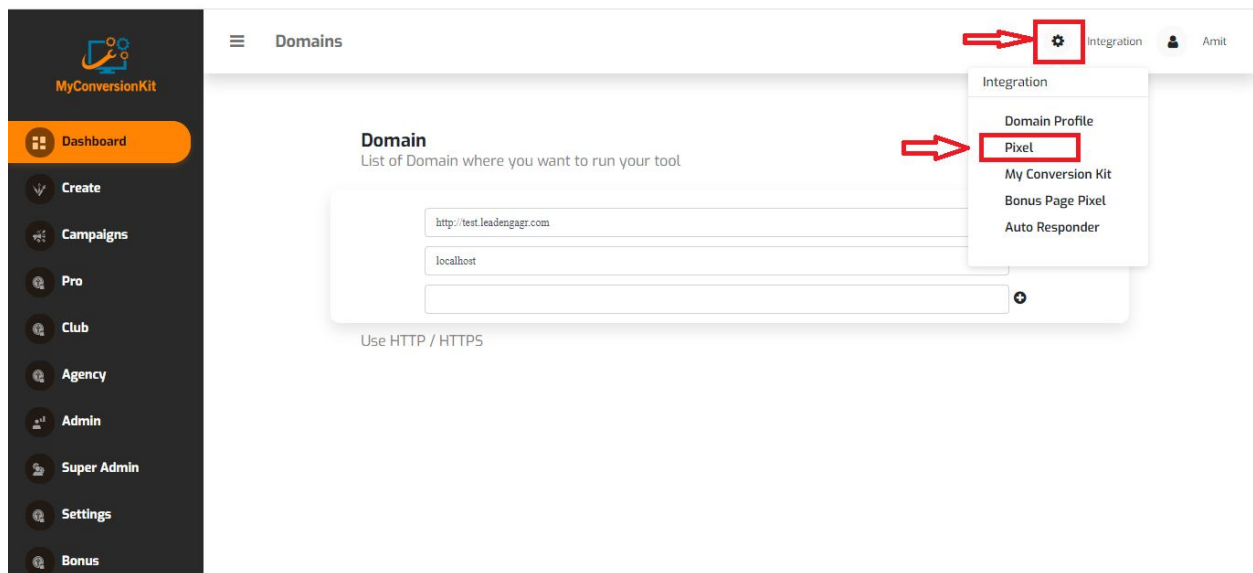

Step2: Click on the add icon and enter the url or domain of the website, on which you want to run the campaign.

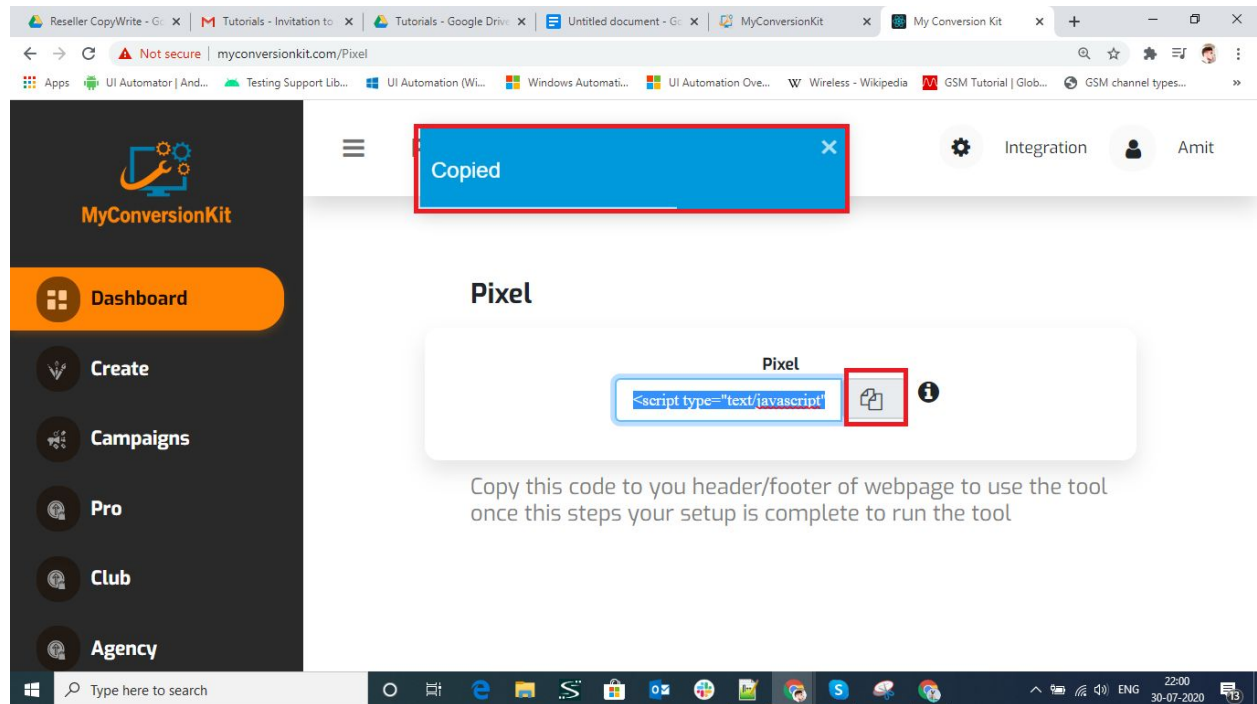

Step3: Once you have added the url or domain, click on the save button.

Step4: Click on the Settings icon and select pixel option.

Step5: Copy the pixel value by left-clicking on the copy icon. Once you get "Copy successful" pop up, add it to your website code.

This is a one-time process. Once done, you can create and run any number of campaigns on the website.
